

LOFTY

YOUR ULTIMATE ALLY AGAINST HUMIDITY

The Lofty is ideal for homes with attics struggling with moisture and mould. This positive input ventilation system also filters and preheats incoming air.

Whether suspended or placed it requires no outdoor air intake or ductwork, making installation quick and easy.

**EFFECTIVE
AGAINST HUMIDITY**

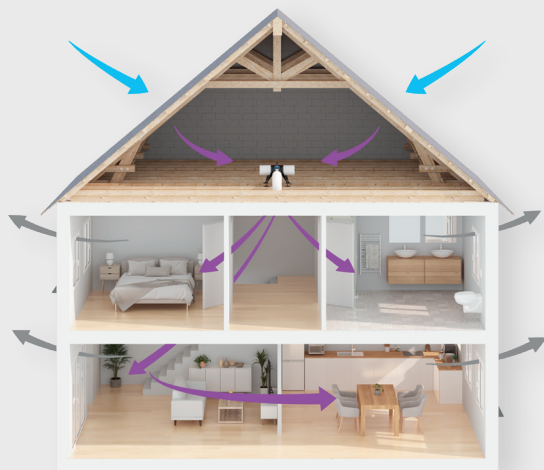

**NO NETWORK NEEDED,
VERY EASY TO INSTALL**

EASY INSTALLATION WITHOUT MAJOR WORK

The Lofty is quick and easy to install, requiring no ductwork, external air intake, or major construction. Mounted on joists or suspended from the framework, only a simple ceiling penetration and diffuser are required for quick and efficient set-up.

Within a few hours, the system is fully operational, without causing any disturbance to your space. No major works or inconvenience: simply fresh, comfortable air effortlessly.

COMFORT THROUGH POSITIVE INPUT VENTILATION

The Lofty delivers fresh, filtered, and temperate air from the attic directly into your home. This slight positive pressure pushes out stale, humid air from each room, ensuring constant renewal of indoor air.

Thanks to this positive input principle, air flows naturally without the need for ductwork. Humidity is controlled, pollutants are removed, and your respiratory comfort is improved for the long term.

FILTER & SAVE

The Lofty filters attic air to remove pollen, dust, and fine particles. During cold periods, it recovers natural heat from the attic, reducing heating needs and saving energy.

Depth: feet = 300 - 650 mm | body = 425 mm
Total height: 400 - 600 mm

TECHNICAL DATA

- » Maximum flow rate: 176 m³/h
- » Maximum recommended surface area: 120 m²
- » Very low power consumption, maximum power: 14 W
- » Rated electrical heating capacity: 450 W
- » From 16.30 dB(A)

FILTERS AVAILABLE

- » Pollen
- » Fine particles
